LINKED EQUIPMENT & CAPNA SYSTEMS

MOBILE HEMP EXTRACTION LABS

EQUIPPED WITH CAPNA ATLES ETHANOL EXTRACTION SYSTEM

The Linked Equipment and Capna® Systems joint effort provides a fully turnkey and modular extraction lab equipped with Capna's ethanol extraction system. The solution fits into two modules that easily load onto a truck trailer to be delivered wherever you need it. Set up and start extracting in hours instead of months.

UNPRECEDENTED PERFORMANCE & CONVENIENCE

The Capna® Design Process offers customized solutions to clients looking for cannabis extraction facilities that are efficient, scalable, and fully integrated. We have a "design-for-scalability" operational philosophy that allows operators to plug-and-play Capna® hardware and scale their extraction process. Capna doesn't just sell systems, they provide solutions.

SAFE AND SECURE

These systems are designed for safety and security with interlocking electrical and emergency systems, ignition source controls, gas detection systems, and ventilation for both dilution and extraction fan systems. Our mobile labs provide customers with a faster time-to-market than traditional lab build outs in a safe and controlled environment that is more than effective for cannabis extraction and processing.

BEGIN EXTRACTING THE DAY THE TRUCK ARRIVES

Our ethanol extraction labs are built in ISBUs (Intermodular Steel Building Units). They are fully automated, state-of-the-art ethanol extraction labs professionally engineered to ensure compliance in all legalized markets. Additionally, the solution has undergone engineering review to provide our customers the highest quality, technologically advanced ethanol extraction labs possible.

Everything you need to start processing in hours instead of weeks!
