

**Turnkey Industrial Hemp Extraction Labs Secured Inside a Shipping Container, Completely Equipped with Capna's Atles Ethanol Extraction System, Process up to 3000 lbs. of Biomass in a 10 Hour Shift with our Turnkey Solution!**

# LINKED EQUIPMENT & CAPNA SYSTEMS TURNKEY MODULAR ETHANOL EXTRACTION SYSTEMS

**Our Turnkey Extraction Labs Come Fully Equipped with Capna's Atlas Ethanol Extraction System, Allowing Extraction to Begin on the Day of Delivery.**

The LINKED EQUIPMENT and Capna® Systems joint effort provides a fully turnkey and modular cannabis extraction lab equipped with an ethanol extraction system that can process up to 3000 lbs. of biomass in a 10-hour shift. In working with Capna® we have designed a lab built from shipping containers that will house the process in as little a footprint as 1500 square feet.

The extraction system is modular, and can start at 1000 lbs. per 10 hour shift and easily ramp up to 3000 lbs. per 10 hour shift simply by adding components. The labs are delivered on site with equipment installed and plumbing fixtures included. Training can be conducted on site, and our turnkey extraction lab solution enables processing to begin on the day of delivery.

**Tailored Solutions** The Capna® and Linked Equipment Design Process offers customized solutions to clients looking for extraction facilities that are efficient, scalable, and fully integrated. This means that we work together with each and every client to identify and serve their production needs - collaborate with us to design your ideal production facility! By creating an extraction process that can be scaled effortlessly, you will save time and money while avoiding any hassle that may disrupt your operation.

**“Modularity”** As your company grows, Capna® and Linked Equipment will grow right alongside you! If your capacity needs outpace your operation, you can easily expand your throughput by adding components from pre-existing Capna® Extraction Platforms, including our premier Atlas or Ares systems. We have a “design-for-scalability” operational philosophy that allows operators to plug-and-play Capna® hardware and scale their extraction process. This modular system reinforces long-term reliability with built-in redundancies, thereby allowing you to lower future capital investments and stay competitive.

Increase your profitability and efficiency and reduce costs with our industrial turnkey modular labs suited to any size hemp extraction operation and able to grow with your business.

## Key Benefits

- ✓ Process up to 3,000 lbs. of hemp in a 10-hour shift
- ✓ Delivered to your site, fully equipped with plumbing
- ✓ Modular labs, fully automated, with high throughput
- ✓ Full data analytics
- ✓ Low operating costs
- ✓ Custom designed for your operation; ability to add components as you grow
- ✓ Design footprint can accommodate even small areas (min. 1,500 sq. ft.)
- ✓ CGMP Certified Processing Consultants offer on-site training
- ✓ Manufactured to highest safety and building standards
