# MODULAR SECURITY VAULT SPECIALISTS

## Custom-Built Secure Storage Vaults for the Cannabis Industry

LINKED EQUIPMENT is becoming a specialist in this new and exciting sector. When building a marijuana facility, vaults are becoming increasingly more and more talked about. These can be used for a variety of purposes. They can be used for monetary purposes, equipment, product, and more. The vaults are totally secure with steel walls and ceilings, a 4-6-inch-thick steel door with lock and with the weight inside, making it nigh on impossible to move or enter.

We offer security systems inside the vaults so you can monitor all your valuables. Security and peace of mind within the facility is very important, we at LINKED EQUIPMENT can make all of this happen.

LINKED EQUIPMENT offers only the highest quality safes for every budget. We have a safe for every need. Whether its fire rated, gun, burglary rated or depository safes, we can build, deliver, and install a fully custom safe for your needs. We are also the leaders in Safe and Vault moving, we can move safes up to 10,000 pounds with our custom trailers.

In the Marijuana business, you have many valuables to protect and keep secure, your safe should have a fire rating as well as be extremely hard for a burglar to get into.

### Fire Safe Ratings

Fire ratings for Burglar/Fire safes vary depending on the safe manufacturer. Many manufacturers opt for private laboratory testing. The safe is exposed to temperatures between 1200-1800 degrees Fahrenheit after which the laboratory times how long the safe's internal temperature stays below 350 degrees. Paper and money begin to char at approximately 387 degrees Fahrenheit, so ideally a fire safe should maintain a temperature at or under 350 degrees.

### Burglar Ratings

Burglar/Fire safes should have manufacturer ratings of B, B/C or C which indicate the thickness of safe walls and doors. In addition, a burglar/fire safe may have a UL RSC (Residential Security Container) certification, indicating the safe model endured a full five minutes of drilling, chiseling, punching, prying, and tampering attacks by Underwriters Laboratory technicians using professional tools--a combination of skills and equipment rarely found in burglars.

### Manufacturer Burglar Ratings Indicate the Following:

**B:** the safe has 1/4-inch steel body and a 1/2-inch steel door.

**C:**the safe has a 1/2-inch steel body and a 1-inch steel door.

**B/C:** any safe with specifications falling between B and C ratings.

A burglar / fire safe with a B, C, B/C, or RSC rating can store \$5,000 to \$100,000 worth of items depending on what you are storing. If you plan on storing more than \$30,000 worth of items, please consider one of LINKED EQUIPMENT's high security safes.
